EDUCATION

New Jersey Institute of Technology – Newark, NJ May 2026
Master of Artificial Intelligence

Emory University – Atlanta, GA May 2025
Bachelor of Arts in Computer Science, Minor in Mathematics

Relevant Coursework: Systems Programming, Software Engineering Practicum, Computational Linguistics, Applications of Machine Learning

WORK EXPERIENCE

Data Science Intern – Emory University AI.Xperience July 2024 – August 2024 | Atlanta, GA

- Cleaned and preprocessed noisy text data (museum artifact descriptions, course catalogs) using Python (pandas, NumPy), improving model input quality through tokenization, normalization, and stopwords filtering.
- Collaborated in a 4 person team to train and fine-tune baseline (logistic regression, SVM) and BERT-based transformer models for bias classification, addressing imbalanced categories with oversampling techniques.
- Conducted exploratory data analysis and error analysis, improving model F1-score by 10–15% and reducing misclassification through iterative preprocessing refinements.
- Documented experiments and contributed example outputs for AI.Xperience Summer 2024 poster and oral presentations, communicating findings effectively to team and faculty leads.

SKILLS

Programming Languages: Python, Swift, Java, JavaScript, C++

Machine Learning & AI Frameworks: scikit-learn, XGBoost, PyTorch, Hugging Face Transformers, FastAPI

Data Analysis & Visualization: pandas, NumPy, Matplotlib, Seaborn, Plotly

Web Development: React, Tailwind CSS

Other: OAuth2 Authentication, NLP, Agile Development Practices

PROJECTS

Spotify Personality Inferencer (TypeTune) July 2025 – August 2025

- Built a full-stack web app (React/Tailwind, FastAPI) that infers MBTI types from Spotify listening data using OAuth2 and metadata analysis.
- Designed an explainable inference engine applying rule-based heuristics on track/artist features to generate transparent MBTI results.
- Integrated Genius API lyrics retrieval, Hugging Face emotion classification, and AI-generated artist summaries to enhance user engagement.

IHME Mortality Prediction Data Analysis January 2025 – May 2025

- Built a machine learning pipeline on IHME Global Burden of Disease data (1970–2010) to predict age-specific mortality rates.
- Trained baseline (Linear, Decision Tree, SVR) and ensemble models (Random Forest, Bagging, Stacking), validated with cross-validation.
- Achieved MAE $\approx 2,114$ and $R^2 \approx 0.87$ with Random Forest, while Bagging delivered near-comparable accuracy with $\sim 10\times$ faster training.

Resume Enhancer & Job Matcher January 2025 – May 2025

- Designed and deployed a web application integrating resume analysis, job scraping, and NLP-based matching.
- Automated job-listing collection with Selenium and BeautifulSoup, handling dynamic pages and simple bot-protection flows to maintain scraping reliability.
- Implemented similarity scoring to optimize resume relevance for market trends and job descriptions.

Jarvis Home Assistant January 2024 – May 2024

- Helped develop a macOS and iOS virtual assistant for smart device control and voice command recognition.
- Built frontend interfaces in Swift, integrating JSON data handling and user customization features.
- Led iterative updates adding enhanced iOS database connectivity and modular smart device management.
